## **DETAILED ACTION**

### ***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 1-8 are rejected under 35 U.S.C. 103(a) as being unpatentable over Beny et al. (US Patent No. 3,608,236) in view of Tilbor et al. (US Patent No. 6,024,627).

**Beny et al. disclose a pair of left and right driven (directed to intended use) wheels; a pair of left and right steered wheels; and a steered wheel-supporting mechanism which supports the steered wheels such that each steered wheel is adapted to turn around a predetermined steering axis and such that the steered wheels are adapted to turn in the same direction in association with each other, wherein the steering axis is inclined with respect to a vertical direction such that an upper portion of the steering axis is located rearward of a lower portion of the steering axis in a traveling direction, and wherein the steered wheel-supporting mechanism is further configured such that, when a speed difference is generated between the driven wheels to turn the automobile model in a turning direction, the steered wheels are naturally steered in the turning direction without any additional steering driving force by a reaction force received from a**

ground-contact surface; the steering axis with respect to the vertical direction (straight or neutral position) is in the range of 20 to 40 degrees (+- 20) (col. 3, lines 42-47).

Beny et al. does not explicitly disclose the left and right driven wheels being independently driven by different driving sources.

Tilbor et al. teach a toy vehicle having a pair of left and right driven wheels being independently driven by different driving sources (col. 3, lines 66-67 through col. 4, lines 1-2).

It would have been obvious to one having ordinary skill in the art at the time the invention was made to provide the pair of left and right driven wheels being independently driven by different driving sources as taught by Tilbor et al., since Beny states that the steering arrangement may be applied also powered toy vehicles (col. 2, lines 17-23).
